### **Simplex Filler Rolls Out New 3-in-1 Combination Table**

**Compact, self-contained production line designed for smaller container fills.**

**Napa, CA — March 12, 2007:** Simplex Filler, the Napa, California based manufacturing company introduces the new 3-in-1 Combination Table to its most-popular line of liquid filling machines.

For production in a small space, the Simplex 3-in-1 Combination Table offers hands-free operation. The combination unscrambler and accumulator table is a compact, self-contained, container handling system with an automated built-in single or double head filling machine.

“It’s ideal for limited spaces,” notes Piper Quinones, Simplex Marketing Director. “Quiet, accurate operation of an electric volumetric filler coupled with easy maintenance and quick-changeover are just a few of the attributes that make this Simplex Combination Table popular in the pharmaceutical, cosmetic, paint and food industries.”

Key features include:

- A variety of single or double head automated filling machines can be attached to this unit.
- Filler operates from any standard 120 VAC, 15 AMP outlet.
- Air supply required. Air compressor available.
- Extremely accurate, repeatable fill cycle (approx. + or - ½% of the fill volume tolerance).
- Small footprint for a 30” dia. accumulation and unscrambling rotary tables measuring (32 H x 30 W x 60 L).
- Net weight 750 lbs. (340 kilos) – includes filler
- Designed to fill a variety of smaller containers and products hands-free.

More information about Simplex and the Simplex 3-in-1 Combination Table, as well as the company’s full line of volumetric and pressure fillers and accessories is available at [www.simplexfiller.com](http://www.simplexfiller.com).

**Digital pictures for the 3-in-1 Combination Table and a .pdf for this release are available on our website under the Press Room link.**

#### **About Simplex Filler**

Simplex Filler Company is a family-owned and operated American manufacturer of the industry’s most reliable, best-known liquid fillers. The company offers a full-range of solutions—from single head, volumetric (piston) fillers to high speed, high fill-volume inline and multi-head volumetric fillers. Many Simplex machines are still hard at work today after decades of reliable operation. Our customers’ applications range from thin-watery fluids to corrosive chemicals and extremely viscous and hard to handle tars and particulates up to 1-inch in diameter. Simplex is a proud member of the Packaging Machinery Manufacturer’s Institute. More information about the company is available from [www.simplexfiller.com](http://www.simplexfiller.com)
